Dear Recruiter,

I grew up in an era where I visualized the greater influence of technology in the world. These changes were also a part of me. I still remember the time I used a telephone to make calls. And suddenly the growth is so drastic before I could realize. I can talk to anyone around the world with the development of social media. These magics tweaked my interest as a Software engineer. I always wanted to contribute my best to these changes.

I was pleased to learn about the position **Software Engineer** available at your company with much delight. With my **Masters in computer science** and **two years** of professional work experience as a web application developer in **Accenture, India**, I am confident in deriving viable solutions to complex business problems through my expertise and problem-solving skills. After close analysis and understanding of the job description and qualifications, I believe that I have all the necessary skill and experience to be successful in this position.

To elaborate my experience in the field of software development, I would like to let you know that I have experience in developing web applications in **React JS, Java and ASP .Net** following agile development methodology. I'm proficient in programming languages like **Java, JavaScript, C#, HTML/CSS and python**.

As a front-end developer, I was responsible for

- Creating web applications in React JS and .Net along with creating RESTful APIs, UI designing, reporting modules.
- Communication with various clients to provide knowledge, and expertise, ensuring that their requirements were fully met.

As a backend developer, I was an expert in

- Creating relational and NoSQL databases, stored procedures, functions and triggers.
- Automating most of the manual jobs which eased the production process.
- Handling complex deployments issues to deliver quality products on time. I excelled myself in handling the bug fixes for the support team.

During my course of Masters study, I have been associated with so many web application developments projects in **JSP, J2EE, Node.js, Express JS** and real time **Android applications**. It would be a pleasure to learn more about your company's vision in the field of Software engineering and provide further insight into how— my highly developed software development abilities, experience managing large complex applications and compelling communication skills— can help your company achieve greater results.

With the hands-on experiences gained at Accenture, I do believe that customer satisfaction and customization to the needs of customer are paramount and these two dynamics will ever remain relevant for (y)our organization's sustained growth

Please find my resume attached herewith for your full consideration.

Thank you for your time and for considering my candidacy for this position. I look forward to hearing from you in the near future to schedule an interview.

Yours truly,
Deepak Veerapandian
